Valet Getaway

Team Number: 1
Team Name: Krums Crumbs
Team Members: Aren Keshishian, Aren Gaprelian, Andrew Gutierrez
Logo: TBD
Revision: 0.0.0

Overview

Theme / Setting / Genre

Valet Getaway is a single-player, 3D third-person action-driving game set in a modern city. The player is a hotel valet who has accumulated a large gambling debt and begins stealing hotel guests' cars to earn enough money to pay it off.

The game combines **driving, action, exploration, and time management**.

Core Gameplay Mechanics Brief

- Steal cars from hotel guests.
- Drive through the city while avoiding traffic, obstacles, and police.
- Find a hidden dealership and sell the vehicle.
- Vehicle damage lowers the selling price.
- Walk to a bus station after each sale and return to the hotel.
- Pay off the debt before the overall timer expires.

Targeted Platform

The main platform will be **WebGL**, allowing the game to run through a web browser and be easily submitted or shared.

Monetization Model

If commercially released, the game would use a **one-time purchase model**.

Project Scope

Valet Getaway will be designed as a small semester project focused on creating one complete gameplay loop. The city will include a hotel, roads, dealership locations, bus stations, traffic, and police.

The team will use Unity and mostly free or existing assets and software.

Estimated Cost: 0–100

Team

Aren Keshishian: TBD
Aren Gaprelian: TBD
Andrew Gutierrez: TBD

Influences

Grand Theft Auto – Third-person movement, driving, city environment, and police chases.

Need for Speed – Fast driving and escaping police.

Crazy Taxi – Time-based driving and quickly reaching destinations.

The Pitch

You play as a hotel valet struggling to pay off a gambling debt, stealing customers' cars and racing through city streets to find a hidden dealership while avoiding police, traffic, and obstacles before time runs out.

Project Description

The player works as a valet at a hotel but has accumulated a large gambling debt. Since their normal job does not provide enough money, they begin stealing cars belonging to hotel guests and selling them to a dealership.

Players must drive through the city while avoiding traffic, obstacles, and police. The dealership changes locations, requiring players to explore rather than follow the same route every time. More expensive vehicles earn more money, but damage reduces their selling price.

After selling a vehicle, the player leaves the car and walks to a bus station. Taking the bus returns them to the hotel so they can steal another vehicle. The entire game takes place under one overall time limit.

As the game progresses, more valuable cars become available, but police become more aggressive. The player wins by paying off the entire debt before time runs out. Getting arrested results in a game-over.

Unique Game Mechanics

- Cars can only be stolen from hotel guests.
- The dealership location changes.
- Car damage reduces selling value.
- The player switches between walking and driving.
- The bus returns the player to the hotel after a sale.
- Police difficulty increases over time.
- One overall timer controls the entire game.

Core Gameplay Mechanics

Driving and Vehicle Selling

The player selects a vehicle from the hotel and drives through the city looking for the dealership. Vehicles have different values, and more valuable vehicles become available as the game progresses.

Collisions damage the car and reduce how much money it is worth. Players must balance driving quickly with protecting the vehicle's value.

Police

Police chase the player while they are delivering stolen cars. Their aggression increases as the game progresses.

If the police catch and arrest the player, the game ends.

Dealership and Bus

Once the dealership is found, the player sells the vehicle and earns money toward their debt.

The player then travels on foot to a bus station. After waiting for the bus, they are returned to the hotel and can begin another delivery.

Debt and Timer

The player has one overall time limit to completely pay off their gambling debt.

Each successful vehicle sale reduces the remaining debt. Paying off the debt wins the game.

Story and Gameplay

Story – Main Beats

Setup: The main character is a hotel valet with a large gambling debt.

Inciting Incident: They realize their normal income is not enough and decide to steal a guest's car.

Rising Action: The player steals and sells increasingly valuable vehicles while avoiding police.

Climax: Police become more aggressive as the player approaches the amount needed to pay off the debt.

Resolution: The player either pays off the debt or is arrested before completing the goal.

Story – Detailed

The main character works as a hotel valet and has accumulated a large gambling debt. Running out of time to repay it, they begin using their access to hotel guests' cars to make money.

After discovering that a dealership will buy stolen vehicles, the character continues stealing cars. More valuable vehicles become available as the game continues, but police become increasingly aggressive.

The player's goal is to pay off the entire debt before time runs out without being arrested.

Gameplay

The game begins at the hotel, where the player walks around and selects a guest's vehicle.

The player enters the vehicle and drives through the city searching for the dealership. They must avoid traffic, obstacles, crashes, and police.

After reaching the dealership, the car is sold based on its value and remaining condition. The player then walks to a bus stop and returns to the hotel.

This gameplay loop repeats until the debt is paid off or the player is arrested.

Assets Needed

2D

- Game logo
- Main menu
- Timer
- Debt and money display
- Vehicle condition display
- Police indicator
- Game-over and victory screens
- Road, building, hotel, dealership, and vehicle textures

3D

- Player character

- Police
- Hotel guests
- Standard vehicles
- Luxury/sports vehicles
- Police cars
- Traffic vehicles
- Bus
- Hotel
- Dealership
- Bus stops
- Roads and buildings
- Traffic lights and street props

Sound

- Engine sounds
- Car collisions
- Tire sounds
- Police sirens
- Traffic sounds
- Footsteps
- Bus sounds
- UI sounds
- Victory and game-over sounds
- Background music

Code

Main Scripts

- PlayerMovement
- VehicleController
- VehicleEnterExit
- VehicleDamage
- VehicleValue
- PoliceAI
- TrafficAI
- DealershipManager
- BusInteraction

- DebtManager
- TimerManager
- GameManager
- UIManager

Animation

Player

- Idle
- Walk
- Run
- Enter vehicle
- Exit vehicle
- Arrested

Environment / NPC

- Police and NPC movement
- Vehicle wheels
- Traffic lights
- Bus movement and doors

Schedule

Prototype

- Player movement
- Third-person camera
- Basic vehicle controls
- Enter and exit vehicles
- Basic hotel and test level

Alpha

- City level
- Dealership system
- Vehicle selling
- Damage and value systems
- Bus transportation
- Traffic
- Police AI
- Debt and timer

Beta

- Improved police behavior
- More vehicle types
- Increasing difficulty
- User interface
- Sound and animations
- Complete gameplay loop
- Balancing and testing

Final

- Bug fixes
- Game balancing
- Improved level design
- Performance optimization
- Final menus and audio
- Playtesting
- WebGL build
- Final presentation and documentation

Course Milestones

Character Movement and Control: Walking, camera, driving, and entering/exiting vehicles.

Built Levels: Hotel, city roads, dealership locations, and bus stations.

In-Game Systems: Timer, debt, money, vehicle damage, selling, and bus transportation.

Opponents: Police AI, pursuit, and arrest system.

Beta: Complete playable gameplay loop from stealing a vehicle to selling it and returning to the hotel.
